

Use the strength and competence of the leading environmental services company.

Disposal. Take-back. Recycling. Raw materials. Complete solutions.

From take-back to secondary raw material we offer you sustainable, customised solutions.

With around 9,000 employees, the ALBA Group earns annual sales of more than 2.2 billion euros – in Germany, 10 other European countries as well as in Asia and the USA. In Europe the ALBA Group is the leading environmental services company and one of the top suppliers of raw materials.

Thanks to modern equipment and technology, the group offers secondary raw materials in all grades and quantities. Its portfolio of services is unparalleled in Germany. The ALBA Group offers its customers complete solutions from one source.

Competence based on two pillars

The ALBA Group consists of two independent pillars: the companies ALBA AG and Interseroh SE. Their different fields of activity complement each other optimally at different levels. ALBA as leading waste management company implements in practice what Interseroh as major system operator and general contractor coordinates.

Use the advantages of a strong partner

The ALBA Group offers you a comprehensive and networked spectrum of efficient added value:

- tailored specifically to your company
- of the highest quality in service and implementation
- with long experience
- with an unparalleled range of services from one source

You have special requirements?

Ask our experts for a comprehensive proposal of advice and implementation adapted to your needs – also in other questions such as, for example, waste avoidance.

Regardless of what service of the ALBA Group you opt for, you will gain time for your core business and benefit from reliable, cost-optimised solutions!

ALBA Group

Product Recycling

Use our intelligent collection systems to pass recyclable products on for optimal reuse or material recycling.

Take-Back of Packaging

Rely on our legally compliant, countrywide take-back services in TÜV Rheinland-certified quality.

Steel and Metal Recycling

Use the know-how of Europe's leading steel recycling company – international in its operations and with a strong regional presence.

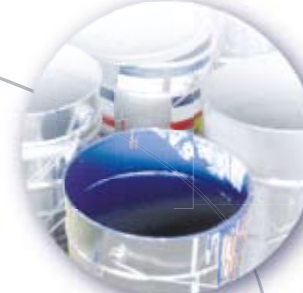

Waste Disposal

Profit from a tailor-made disposal management system for all waste fractions as well as individualised concepts for site and store disposal.

Disposal of Special Wastes

When it comes to hazardous wastes, trust in our decades of experience – qualified and certified.

Electrical and Electronic Scrap

Choose one of the leading companies in the industry for countrywide collection and legally compliant recycling of all categories of waste electrical and electronic equipment and scrap.

Innovations

Discover tailor-made materials for your needs in unique quality.

Reusable Pooling Systems

Gain an edge with an individual, reliable logistical solution with smooth processes for your supply chain.

Facility Services

Contract us for property and operational facility management including comprehensive spectrum of services.

Raw Materials Trading

Rely as supplier or customer on our international competence for recycling and pooling of substance streams in first-class quality.

Waste Disposal

Collection, recovery and removal of all types of waste from one partner and therefore logistically optimised: quick, reliable and cost-effective, with an extensive range of services from collection to actual disposal.

- **Certified services** – for private households, municipalities, trade, commerce and industry
- **Complete waste disposal management** – countrywide, reliable site, warehouse and store disposal including administration
- **Analysis and optimisation** – detailed survey of the situation and development of cost-optimised solutions including strategies for permanent waste avoidance
- **Individual solutions** – conception and implementation of complex, specially customised disposal tasks

Disposal of Special Wastes

Smooth processing of declaration, collection, storage, treatment, transport and documentation: reliable, with years of experience and in line with the highest safety standards for industry, trade, commerce and public administration.

- **Customised take-back systems** – for insulation material residues and empty packaging containers, wash and cleaning chemical containers, etc., environmentally compatible and in accordance with applicable laws
- **Certified specialised waste management company** – for special wastes and hazardous substances, well-versed in approval and documentation processes including laboratory service for necessary analyses
- **Comprehensive infrastructure** – own intermediate storage sites for special wastes and own fleet of special vehicles
- **Competent and specialised counselling** – according to ADR/GGVS

Raw Materials Trading

Worldwide marketing and trading in all raw materials suitable for recycling, cost-optimised through Europe-wide pooling and short transport routes.

- **Resources management** – among others for recovered paper, plastics, glass, electrical and electronic scrap, residual wastes, substitute fuels, recovered wood, old carpets and bulky waste – including associated forwarding services, equipment management and processing of residual wastes
- **„Zero waste“ philosophy** – secondary raw materials of the highest quality through exact collection and clean separation by sorts thanks to modern sorting facilities

Facility Services

Countrywide offer of a full-service provider for more planning certainty: complete property management, certified, from one partner, with experience from the management of currently 230,000 dwelling units as well as commercial and special properties.

- **Infrastructural** – care-taking, garden/landscape maintenance, cleaning service, winter service, etc.
- **Commercial** – rent and property contract management, dunning, claims management, budgeting, object controlling, etc.
- **Technical** – minor repairs, renovation of empty flats, coordination of maintenance work, maintenance, inspection and repair of technical building equipment, etc.

Reusable Pooling Systems

Individual solutions for supply chains: Europe-wide, with consistent individual tracking, active management and cost optimisation by networking.

- **Closed cycle** – transparent and reliable
- **Environment-friendly reusable products** – tailored according to needs from recycled plastic

Innovations

Unique product and process developments in the field of recycling with the focus on customised individual solutions.

- **High-tech sorting processes** – clean separation of material fractions from household, commercial and industrial collection and improvement in the level of purity in the sorting facilities of ALBA
- **Interseroh recycled-resource** – innovative process for the manufacturer of tailored recycle compounds, so-called procyclen compounds, of old plastic in tested, reproducible quality including upcycling, REACH-compliant for injection and blow moulding, e.g. of sales packaging, bottle crates, reusable transport packaging or vehicle parts

Electrical and Electronic Scrap

Countrywide disposal of electrical and electronic scrap and production wastes, dismantling, reduction in the concentration of harmful substances, separation of complex wastes, recovery of raw materials.

- **Take-back according to the German WEEE Act** – with all services from one partner for manufacturers and distributors, including registration, take-back, insolvency-protected guarantee and trusteeship according to the foundation Elektro-Altgeräte Register
- **Processing** – extensive recycling in the highest quality as befitting an environmental services company focussed on sustainability

Product Recycling

Reliable collection and recovery systems for companies and public organisations.

- **Office collection systems** – for empty ink and toner cartridges as well as CDs, DVDs and used mobile telephones still in working order, buying and selling of empty printer cartridges
- **Recycling of thermoplastic membranes in ROOFCOLLECT®** – with long experience in the branch
- **Take-back of batteries** – in 11 German states

Take-Back of Packaging

Services with TÜV Rheinland-certified service quality, a lead of around 20 years in experience and extensive branch know-how.

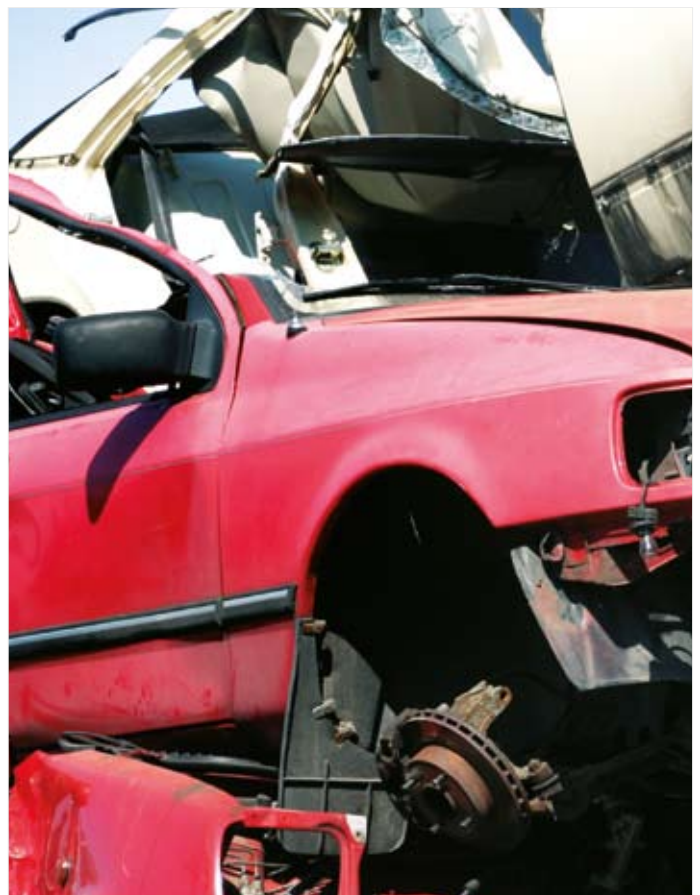

- **Interseroh vario with the optimal mix of Dual System Interseroh and Branch Solutions Interseroh** – recognised system operator, legally compliant implementation of the Packaging Ordinance for household sales packaging and certified price-benefit support quality
- **Take-back of transport packaging** – with the competence of the number 1 on the market and an unparalleled, countrywide network of more than 600 partners for transport and recycling
- **Repasack system** – efficient recycling of paper sacks
- **Interseroh Deposit System** – reliable with comprehensive portfolio of services, countrywide collection, registration in one of our 12 counting centres, clearing and recovery

Steel and Metal Recycling

With the know-how of one of the 10 biggest steel recycling companies in the world, leaders in Europe – processing and marketing of around 2.3 million tons of steel scrap and around 380,000 tons of non-ferrous metal scrap per year.

- **Processing of scrap steel** – exact orientation to the European Steel Scrap Specification or ISRI specification
- **Recovery of non-ferrous metals** – cost-optimised, sorted by types and especially energy-saving
- **Efficient processing equipment** – optimal charging through exact compliance with all batch specifications of the steelwork customers
- **Dismantling and demolition** – of end-of-life vehicles, ships, all types of machinery, industrial plants, professionally including the disposal of hazardous and residual substances

Services in harmony with ecology and economy.

Like the complete recycling and waste management industry, the ALBA Group is currently experiencing the transition from pure waste management company to raw materials supplier – completely in keeping with a true closed loop recycling management system. Our philosophy is also based on this principle: wastes are valuable raw materials for production purposes and simultaneously spare our stock of natural resources. In this way the ALBA Group pursues the core idea of protecting our environment and reducing climate-damaging emissions – in the context of economic activity.

Regardless of whether we are talking about the recycling of packaging or waste products – it is only possible to add value if through comprehensive organisation and specific quality management high-quality secondary raw materials are created and returned to the international resources cycle. In so doing the focus must always lie on cost efficiency and environmental awareness.

With their activities, ALBA and Interseroh close economic substance cycles to the sustainable benefit of industry, trade, commerce, consumers and therefore also the environment.
