

Professional waste management. The highest environmental standards.

Your certified specialist for **hazardous waste**

With ALBA, you are on the side of caution when it comes to hazardous waste

Are you looking for a reliable and professional service provider for the professional management of old paint, coatings and solvents? Then ALBA is your expert for hazardous waste.

Used oils or chemicals – hazardous waste of this kind is best managed by the specialists from ALBA. We are established throughout Germany, and combine **all the services in the waste management chain at one single source**. As a long standing partner to industry, trading businesses, retailers and public administration, we are able to classify, transport, store and dispose of your hazardous waste materials at all times. With ALBA, you receive legally compliant services that satisfy the highest environmental standards. This also applies to the disaster scenario: our specialists can handle hazardous waste of all danger classifications on a professional, ad-hoc basis.

Superbly trained personnel, the latest waste management systems and technology and the appropriate infrastructure form the basis for our success. All our employees are specialists in the field of hazardous waste, from our drivers to our customer advisers. Our special vehicles are equipped containers for hazardous waste in a range of different sizes to allow the professional and safe transportation of old paint, paint/varnish sludge or contaminated soil from A to B. We've got everything: from the five litre canister to the 36 cubic metre container. As professionals for hazardous waste, we also have a variety of storage depots throughout Germany, where we store hazardous waste in special containers before it is sent for its final disposal.

As specialists for hazardous waste, we guarantee you:

– A waste management service for your company according of the legal obligations and regulations

– The use of the latest waste management technology and special container systems for all types of waste

– Compliance with the highest environmental standards

– Professional logistics with our in-house vehicle fleet

– Full electronic certification for hazardous waste

– Safety at all times

Individual concepts for every waste-related situation

From luminous tubes to industrial effluent – ALBA covers the full range of hazardous waste materials and also supports your company with sustainable waste management.

Hazardous waste can be found in every sector. Whether it is old paints and varnishes used by decorators, old luminous tubes from the local supermarket, or toxic solvents from the textile industry – we offer the appropriate solution for every waste-related situation and every customer. And there's more: we can also create **customised waste management concepts** and advise you with the optimisation of your internal waste management processes and options for the prevention of waste. Via our user-friendly website, ALBAsigner, you can subsequently track and trace all of the waste management steps and view your waste balance.

Whether it is large-scale companies, small handicraft businesses, or waste management services in rural areas – according to the requirements, we offer a **variety of collection systems and waste management services**. With large volumes of waste, our

field staff make direct companies visits to collect the hazardous waste and take it to the depot. The following applies to small business customers: you can submit up to two tonnes per year. Our mobile hazardous waste collection vehicles are responsible for the disposal of municipal hazardous waste. They operate throughout Germany, and on behalf of the municipalities, they collect hazardous waste from private households, small businesses and schools.

At our depots we are able to store more than 400 different types of hazardous waste on a safe and processional basis. At ALBA, this means: we store the different types of waste separately and in special containers for hazardous waste before the recovery and further processing of the individual substances is completed at other locations.

Examples of hazardous waste:

- Old paint, old varnish and paint/varnish sludge
- Used oils and oily compounds
- Chemicals
