

Modern technology, safe handling of hazardous waste, high volumes of recycling.

Your innovative specialist for the **recycling of electronics**

Recycling of electronics from a single source

Are you looking for an experienced and reliable services provider who can offer effective waste management and the high quality recycling of your electrical and electronic waste? Then look no further than ALBA.

The companies in the ALBA Group are fully certified specialist waste management companies which offer the competent and environmentally friendly collection and material recovery of electrical and electronic waste and their components.

We are therefore one of the leading recycling companies in Germany. This means that in our own **modern processing and recycling plants** the electronic waste is prepared into high quality recycled raw materials – including a wide range of metals and plastics – and made available to industry for the production of new products. Any hazardous substances that arise during this work are professionally disposed of.

At our group, the service you choose comes from a single source: whether it is the organisation, the collection, the preparation or the recycling. We offer industry, retailers, companies, municipal organisations and administrative bodies a **complete service that is unique**.

If you turn to ALBA for your electronics recycling, you have the following guarantees:

Compliance with all the current regulations and laws

The use of modern recycling technologies and compliance with the highest environmental standards

The protection of technical manufacturer know-how with the recycling of production waste from all sectors and new device components

No illegal exports to the Third World

Our locations are equipped with manual and automated dismantling systems for visual display devices – for both conventional CRT devices and flat screen devices.

Sustainability and resource efficiency

Electronic waste includes used electrical and electronic devices and their components which are no longer usable because they are either defective or have been replaced by new equipment. These devices contain many different materials which we can recover as recycled raw materials with the use of innovative technologies and our own certified recycling plants.

Do you require our services?

Arrange an initial consultation with us at any time (please see reverse side for personal contacts). Allow yourself to be convinced by our organisationally sophisticated collection and logistics systems, the processes we use to ensure the **completely environmentally-friendly disassembly** on location, and our professional and innovative recycling solutions.

You can be sure of being impressed by the ALBA Group philosophy, which is based on sustainability and resource-efficiency. If you would like to find out more, please contact us!

We differentiate between:

- Entertainment-based electronics
- Computer scrap
- Telecommunication systems
- Refrigerators
- Flat screens
- Mobile end-devices and smart-phones
- Large household- and small electronic devices
- Devices/storage heaters containing asbestos
- Medical technology
- Maintenance and control systems
- Toys, leisure and sports equipment
- Electrical tools
- and much more

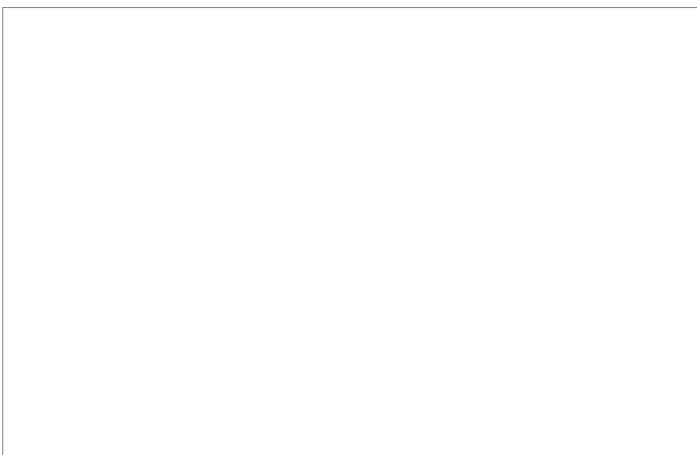

At our Lustadt site we have a mechanical processing system for small electrical devices and sophisticated composite materials. Our capacity for the sorting and separation of metals and plastics amounts to 50,000 tonnes per year.

An overview of our services – especially in Germany:

- Waste management of used electrical and electronic devices at municipal and industrial collection sites, including sustainable recovery
- Registration service and volume notification service for the EAR foundation
- Supporting electronics manufacturers with the configuration, organisation and operation of individual recovery systems through the use of sophisticated B2B solutions.
- Supporting municipal organisations as partners with their own recovery of used electrical devices
- Disassembly on site and reconstruction of complex electrical systems
- Destruction of electronic data carriers and security-relevant products and materials – inclusive of documentation and proof of destruction
- Environmentally friendly recovery of complex production waste
- Professional consultations and advice from a dedicated team

Additional service: The experts at ALBA will also advise you on projects and plans in other countries. We are at your service in all markets.
